---

[a] This station was temporarily closed during the month of January.

[b] Owing to some unavoidable defects in the recording instrument, the velocity of the wind had to be omitted occasionally for a few days in several months and in several of the stations included in these summaries.

[c] 28 days of observation.

[d] 27 days of observation.

[e] 22 days of observation.

[f] 30 days of observation.

---

[a] The barometric readings of this station are not reduced to sea level.

[b] No observation was made of wind direction on August 21 to 31, 2 a. m. and 10 p. m.

[c] No observation was made of wind direction on September 1 to 14, 2 a. m. and 10 p. m.

[d] 27 days of observation.

[e] No observation was made of wind direction on June 2, 2 p. m., 6 p. m. and 10 p. m.; on the 3d and 4th; and on the 5th, 2 a. m.

INTRODUCTION.

The magnetic Observatory, which is a division or branch of the Weather Bureau, Manila Observatory, was located at Manila in the Observatory grounds until 1904, but it had to be temporarily closed on account of the electric car system established in that city. The new location at Antipolo lies due east of the old at a distance of 18.5 kilometers. The coördinates of the variation building are 121° 10′ E and 14° 36′ N, its elevation above the sea level about 215 meters.

A description of the buildings, instruments, and method both of observation and of reduction, will be found in the "Annual Report of the Weather Bureau for the year 1911, Part IV." The arrangement of the magnetic values in this publication is the same as that of 1911; we adopted the distribution given by the Coast and Geodetic Survey of the United States of America to similar publications of its magnetic observatories.

For all the observations the Insular standard time of the Philippine Archipelago, eight hours (8^h) or the 120^{th} meridian east of Greenwich, is used.

Diurnal Variation of D.

1914

[Five International quiet days. Time 8h E of Greenwich; 24h or 0h = midnight.]
